**Subject:** RE: MW load to install CAA upgrades at GGS?

Joe,

The station service for scrubbers (both units combined) is estimated to be 36 MW. The station service for SCR's (both units combined) is estimated to be 10 MW. So, ~46 MW combined.

Mick

FYI---I can get the numbers from Mick and send to Director Harding.  
MW numbers for scrubbers, and MW numbers for SCR.  
Is this OK?

Joe

Do you have an estimated loss of MW to run the expected new emissions control equipment at GGS? Thanks. Mary
